Package 'mcmcr'

September 26, 2020

```
Title Manipulate MCMC Samples
Version 0.4.0
Description Functions and classes to store, manipulate and
     summarise Monte Carlo Markov Chain (MCMC) samples. For more
     information see Brooks et al. (2011) <isbn:978-1-4200-7941-8>.

Description

Coerces MCMC objects to an mcarray object.

4 as.mcmc.mcarray

Usage

```
as.mcarray(x, ...)
## S3 method for class 'list'
as.mcmcr(x, ...)
```

Arguments

x object to coerce.
... Unused.

Methods (by class)

• list: Convert a list of uniquely named objects that can be coerced to [mcmcarray-object]s to an mcmcr object

Examples

```
as.mcarray(mcmcr_example$beta)
```

as.mcmc.mcarray

Markov Chain Monte Carlo Objects

Description

The function mcmc is used to create a Markov Chain Monte Carlo object. The input data are taken to be a vector, or a matrix with one column per variable.

If the optional arguments start, end, and thin are omitted then the chain is assumed to start with iteration 1 and have thinning interval 1. If data represents a chain that starts at a later iteration, the first iteration in the chain should be given as the start argument. Likewise, if data represents a chain that has already been thinned, the thinning interval should be given as the thin argument.

An meme object may be summarized by the summary function and visualized with the plot function.

MCMC objects resemble time series (ts) objects and have methods for the generic functions time, start, end, frequency and window.

Usage

```
## S3 method for class 'mcarray'
as.mcmc(x, ...)
```

Arguments

x An object that may be coerced to an mcmc object... Further arguments to be passed to specific methods

Author(s)

Martyn Plummer

Markov Chain Monte Carlo Objects

Description

The function mcmc is used to create a Markov Chain Monte Carlo object. The input data are taken to be a vector, or a matrix with one column per variable.

If the optional arguments start, end, and thin are omitted then the chain is assumed to start with iteration 1 and have thinning interval 1. If data represents a chain that starts at a later iteration, the first iteration in the chain should be given as the start argument. Likewise, if data represents a chain that has already been thinned, the thinning interval should be given as the thin argument.

An meme object may be summarized by the summary function and visualized with the plot function.

MCMC objects resemble time series (ts) objects and have methods for the generic functions time, start, end, frequency and window.

as.mcmcarray 7

Usage

```
## S3 method for class 'mcmcr'
as.mcmc(x, ...)
```

Arguments

x An object that may be coerced to an mcmc object

... Further arguments to be passed to specific methods

Author(s)

Martyn Plummer

See Also

```
mcmc.list, mcmcUpgrade, thin, window.mcmc, summary.mcmc, plot.mcmc.
```

as.mcmcarray

Coerce to an mcmcarray object

Description

Coerces MCMC objects to an mcmcarray-object().

Usage

```
as.mcmcarray(x, \ldots)
```

Arguments

x object to coerce.

... Unused.

```
as.mcmcarray(as.mcarray(mcmcr_example$beta))
```

8 as.memer

as.mcmcr

Convert to an mcmcr Object

Description

Converts an MCMC object to an mcmcr-object().

Usage

```
as.mcmcr(x, ...)
## S3 method for class 'mcarray'
as.mcmcr(x, name = "par", ...)
## S3 method for class 'mcmcarray'
as.mcmcr(x, name = "par", ...)
## S3 method for class 'nlist'
as.mcmcr(x, ...)
## S3 method for class 'nlists'
as.mcmcr(x, ...)
## S3 method for class 'mcmc'
as.mcmcr(x, ...)
## S3 method for class 'mcmc'
as.mcmcr(x, ...)
## S3 method for class 'mcmc.list'
as.mcmcr(x, ...)
## S3 method for class 'mcmcrs'
as.mcmcr(x, ...)
```

Arguments

x An MCMC object. . . . Unused.

name A string specifying the parameter name.

Value

An mcmcr object.

Methods (by class)

- mcarray: Convert an mcarray object to an mcmcr object
- mcmcarray: Convert an mcmcarray-object() to an mcmcr object
- nlist: Convert an nlist::nlist-object() to an mcmcr object
- nlists: Convert an nlist::nlists-object() to an mcmcr object
- mcmc: Convert an coda::mcmc() object to an mcmcr object
- mcmc.list: Convert an coda::mcmc.list() object to an mcmcr object
- mcmcrs: Convert tan mcmcrs-object() to an mcmcr object

as.mcmcrs 9

Examples

```
mcmc.list <- coda::as.mcmc.list(mcmcr::mcmcr_example)
as.mcmcr(mcmc.list)</pre>
```

as.mcmcrs

Convert to an mcmcrs object

Description

Converts an MCMC object to an mcmcrs-object().

Usage

```
as.mcmcrs(x, ...)
## S3 method for class 'list'
as.mcmcrs(x, ...)
## S3 method for class 'mcmcr'
as.mcmcrs(x, name = "mcmcr1", ...)
```

Arguments

```
x An MCMC object.... Unused.name A string specifying the element name.
```

Value

An mcmcrs object.

Methods (by class)

- list: Convert a list of [mcmcr-object]s to an mcmcrs object
- mcmcr: Convert an mcmcr-object() to an mcmcrs object

```
as.mcmcrs(mcmcr::mcmcr_example)
```

10 as_nlists.mcmc.list

as_nlist.mcmcr

Coerce to nlist

Description

Coerce an R object to an nlist_object().

Usage

```
## S3 method for class 'mcmcr'
as_nlist(x, ...)
```

Arguments

x An object. ... Unused.

Value

An nlist object.

Methods (by class)

- numeric: Coerce named numeric vector to nlist
- list: Coerce list to nlist
- data.frame: Coerce data.frame to nlist
- mcmc: Coerce mcmc (with one iteration) to nlist
- mcmc.list: Coerce mcmc.list (with one iteration) to nlist

Examples

```
as_nlist(list(x = 1:4))
as_nlist(c(`a[2]` = 3, `a[1]` = 2))
```

Description

Coerce an R object to an nlists_object().

Usage

```
## S3 method for class 'mcmc.list'
as_nlists(x, ...)
```

Arguments

```
x An object.
... Unused.
```

as_nlists.mcmcr 11

Value

An nlists object.

Methods (by class)

• list: Coerce list to nlists

• mcmc: Coerce mcmc to nlists

• nlist: Coerce nlist to nlists

Examples

```
as_nlists(list(nlist(x = c(1, 5)), nlist(x = c(2, 3)), nlist(x = c(3, 2))))
```

as_nlists.mcmcr

Coerce to nlists

Description

Coerce an R object to an nlists_object().

Usage

```
## S3 method for class 'mcmcr'
as_nlists(x, ...)
```

Arguments

x An object.
... Unused.

Value

An nlists object.

Methods (by class)

• list: Coerce list to nlists

• mcmc: Coerce mcmc to nlists

• nlist: Coerce nlist to nlists

```
as_nlists(list(nlist(x = c(1, 5)), nlist(x = c(2, 3)), nlist(x = c(3, 2))))
```

12 bind_chains.mcmc

bind_chains.mcarray Bind by Chains.

Description

Binds two MCMC objects (with the same parameters and iterations) by chains.

Usage

```
## S3 method for class 'mcarray'
bind_chains(x, x2, ...)
```

Arguments

x An object.

x2 A second object.

... Other arguments passed to methods.

Value

The combined object.

See Also

Other MCMC manipulations: bind_iterations(), collapse_chains(), estimates(), split_chains()

bind_chains.mcmc

Bind by Chains.

Description

Binds two MCMC objects (with the same parameters and iterations) by chains.

Usage

```
## S3 method for class 'mcmc'
bind_chains(x, x2, ...)
```

Arguments

x An object.

x2 A second object.

... Other arguments passed to methods.

Value

The combined object.

See Also

Other MCMC manipulations: bind_iterations(), collapse_chains(), estimates(), split_chains()

bind_chains.mcmc.list 13

```
bind_chains.mcmc.list Bind by Chains.
```

Description

Binds two MCMC objects (with the same parameters and iterations) by chains.

Usage

```
## S3 method for class 'mcmc.list'
bind_chains(x, x2, ...)
```

Arguments

x An object.

x2 A second object.

. . . Other arguments passed to methods.

Value

The combined object.

See Also

Other MCMC manipulations: bind_iterations(), collapse_chains(), estimates(), split_chains()

```
bind_chains.mcmcarray Bind by Chains.
```

Description

Binds two MCMC objects (with the same parameters and iterations) by chains.

Usage

```
## S3 method for class 'mcmcarray'
bind_chains(x, x2, ...)
```

Arguments

x An object.

x2 A second object.

... Other arguments passed to methods.

Value

The combined object.

```
Other MCMC manipulations: bind_iterations(), collapse_chains(), estimates(), split_chains()
```

14 bind_dimensions

bind_chains.mcmcr Bind by Chains.

Description

Binds two MCMC objects (with the same parameters and iterations) by chains.

Usage

```
## S3 method for class 'mcmcr'
bind_chains(x, x2, ...)
```

Arguments

x An object.x2 A second object.

... Other arguments passed to methods.

Value

The combined object.

See Also

Other MCMC manipulations: bind_iterations(), collapse_chains(), estimates(), split_chains()

bind_dimensions

Combine two MCMC objects by dimensions

Description

Combines multiple MCMC objects (with the same parameters, chains and iterations) by parameter dimensions.

Usage

```
bind_dimensions(x, x2, along = NULL, ...)
```

Arguments

```
x An MCMC object.x2 a second MCMC object.
```

along A count (or NULL) indicating the parameter dimension to bind along.

... Unused.

See Also

```
bind_dimensions_n()
```

```
bind_dimensions(mcmcr_example, mcmcr_example)
```

bind_dimensions_n 15

bind_dimensions_n

Combine multiple MCMC objects by parameter dimensions

Description

Combines multiple MCMC objects (with the same parameters, chains and iterations) by parameter dimensions.

Usage

```
bind_dimensions_n(...)
```

Arguments

```
... one or more MCMC objects
```

See Also

```
bind_dimensions()
```

Examples

```
bind_dimensions_n(mcmcr_example, mcmcr_example, mcmcr_example)
```

bind_parameters

Combine two MCMC object by parameters

Description

Combines two MCMC objects (with the same chains and iterations) by their parameters.

Usage

```
bind_parameters(x, x2, ...)
```

Arguments

```
x an MCMC objectx2 a second MCMC object... unused
```

```
bind_parameters(
  subset(mcmcr_example, pars = "sigma"),
  subset(mcmcr_example, pars = "beta")
)
```

16 check_mcmcr

check_mcmcarray

Soft-deprecated *Check mcmcarray*

Description

Soft-deprecated Check mcmcarray

Usage

```
check_mcmcarray(x, x_name = substitute(x), error = TRUE)
```

Arguments

x The object to check.

x_name A string of the name of the object.

error A flag indicating whether to throw an informative error or immediately generate

an informative message if the check fails.

Value

An invisible copy of x (it if doesn't throw an error).

Examples

```
check_mcmcarray(mcmcr::mcmcr_example$beta)
```

check_mcmcr

Soft-deprecated Check mcmcr

Description

Soft-deprecated Check mcmcr

Usage

```
check\_mcmcr(x, sorted = FALSE, x\_name = substitute(x), error = TRUE)
```

Arguments

x The object to check.

sorted A flag specifying whether the parameters must be sorted.

x_name A string of the name of the object.

error A flag indicating whether to throw an informative error or immediately generate

an informative message if the check fails.

Value

An invisible copy of x (it if doesn't throw an error).

```
check_mcmcr(mcmcr::mcmcr_example)
```

chk_mcmcr 17

chk_mcmcr

Check MCMC Objects

Description

```
Checks class and structure of MCMC objects.

chk_mcmcarray checks if mcmcarray-object() object using is.array(x) && is.numeric(x) chk_mcmcr checks if an mcmcr-object().

chk_mcmcrs checks if an mcmcrs-object().
```

Usage

```
chk_mcmcarray(x, x_name = NULL)
chk_mcmcr(x, x_name = NULL)
chk_mcmcrs(x, x_name = NULL)
```

Arguments

x The object to check.x_name A string of the name of object x or NULL.

Details

To just check class use chk::chk_s3_class().

Value

NULL, invisibly. Called for the side effect of throwing an error if the condition is not met.

Functions

- chk_mcmcarray: Check mcmcarray Object
- chk_mcmcr: Check mcmcr Object
- chk_mcmcrs: Check mcmcrs Object

See Also

```
vld_mcmcr()
```

```
# chk_mcmcarray
try(chk_mcmcarray(1))
# chk_mcmcr
chk_mcmcr(as.mcmcr(list(x = 1)))
try(chk_mcmcr(1))
```

18 coef

```
# chk_mcmcrs
chk_mcmcrs(as.mcmcrs(as.mcmcr(list(x = 1))))
try(chk_mcmcrs(1))
```

coef

Term Coefficients

Description

Gets coefficients for all the terms in an MCMC object.

Usage

```
## S3 method for class 'mcmc'
coef(object, conf_level = 0.95, estimate = median, ...)
```

Arguments

object The MCMC object to get the coefficients for conf_level A number specifying the confidence level. By default 0.95.

estimate The function to use to calculate the estimate.

... Unused

Value

An data frame of the coefficients with the columns indicating the term, estimate, standard deviation (sd), zscore, lower and upper credible intervals and pvalue.

Methods (by class)

• mcmc: Get coefficients for terms in mcmc object

See Also

```
stats::[coef][stats::coef]
```

```
coef(mcmcr_example)
```

collapse_chains.mcmcr 19

```
collapse_chains.mcmcr Collapse Chains
```

Description

Collapses an MCMC object's chains into a single chain.

Usage

```
## S3 method for class 'mcmcr'
collapse_chains(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

The modified object with one chain.

See Also

Other MCMC manipulations: bind_chains(), bind_iterations(), estimates(), split_chains()

combine_dimensions

Combine Samples by Dimensions

Description

Combines MCMC object samples by dimensions along along using fun.

Usage

```
combine_dimensions(x, fun = mean, along = NULL, ...)
```

Arguments

x An MCMC object

fun The function to use when combining dimensions

along A positive integer (or NULL) indicating the parameter dimension(s) to bind

along.

... Unused

Value

The MCMC object with reduced dimensions.

```
combine_dimensions(mcmcr_example$alpha)
```

20 combine_samples_n

combine_samples

Combine MCMC Samples of Two Objects

Description

Combines samples of two MCMC objects (with the same parameters, chains and iterations) using a function.

Usage

```
combine\_samples(x, x2, fun = mean, ...)
```

Arguments

x An MCMC object.
x2 A second MCMC object.

fun The function to use to combine the samples. The function must return a scalar.

... Unused.

Value

The combined samples as an MCMC object with the same parameters, chains and iterations as the original objects.

Examples

```
combine_samples(mcmcr_example, mcmcr_example, fun = sum)
```

combine_samples_n

Combine MCMC Samples of multiple objects

Description

Combines samples of multiple MCMC objects (with the same parameters, chains and iterations) using a function.

Usage

```
combine_samples_n(x, ..., fun = mean)
```

Arguments

x An MCMC object (or a list of mcmc objects).

... Additional MCMC objects.

fun A function.

```
combine_samples_n(mcmcr_example, mcmcr_example, mcmcr_example, fun = sum)
```

converged.default 21

converged.default Converged

Description

Tests whether an object has converged.

Usage

```
## Default S3 method:
converged(
    x,
    rhat = 1.1,
    esr = 0.33,
    by = "all",
    as_df = FALSE,
    na_rm = FALSE,
    ...
)
```

Arguments

x	An object.
rhat	The maximum rhat value.
esr	The minimum effective sampling rate.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
	Other arguments passed to methods.

Value

A logical scalar indicating whether the object has converged.

See Also

```
Other convergence: converged_pars(), converged_terms(), esr_pars(), esr_terms(), esr(), rhat_pars(), rhat_terms(), rhat()
```

```
converged(mcmcr_example)
```

22 converged.mcmcrs

converged.mcmcrs

Converged

Description

Tests whether an object has converged.

Usage

```
## S3 method for class 'mcmcrs'
converged(
    x,
    rhat = 1.1,
    esr = 0.33,
    by = "all",
    as_df = FALSE,
    bound = FALSE,
    na_rm = FALSE,
    ...
)
```

Arguments

X	An object.
rhat	The maximum rhat value.
esr	The minimum effective sampling rate.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
bound	flag specifying whether to bind mcmcrs objects by their chains before calculating rhat.
na_rm	A flag specifying whether to ignore missing values.
	Other arguments passed to methods.

Value

A logical scalar indicating whether the object has converged.

See Also

```
Other convergence: converged_pars(), converged_terms(), esr_pars(), esr_terms(), esr(), rhat_pars(), rhat_terms(), rhat()
```

```
converged(mcmcrs(mcmcr_example, mcmcr_example))
converged(mcmcrs(mcmcr_example, mcmcr_example), bound = TRUE)
```

esr.mcarray 23

esr	.m	ıca	r	ra	٧

Effective Sampling Rate

Description

Calculates the effective sampling rate (esr).

Usage

```
## S3 method for class 'mcarray'
esr(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

x	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
• • •	Other arguments passed to methods.

Details

By default

$$\frac{1}{1 + 2\sum_{k=1}^{\infty} \rho_k(\theta)}$$

from Brooks et al. (2011) where the infinite sum is truncated at lag k when $\rho_{k+1}(\theta) < 0$.

Value

A number between 0 and 1 indicating the esr value.

References

Brooks, S., Gelman, A., Jones, G.L., and Meng, X.-L. (Editors). 2011. Handbook for Markov Chain Monte Carlo. Taylor & Francis, Boca Raton.

```
Other convergence: converged_pars(), converged_terms(), converged(), esr_pars(), esr_terms(), rhat_pars(), rhat_terms(), rhat()
```

24 esr.mcmc

esr.mcmc

Effective Sampling Rate

Description

Calculates the effective sampling rate (esr).

Usage

```
## S3 method for class 'mcmc'
esr(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

X	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
• • •	Other arguments passed to methods.

Details

By default

$$\frac{1}{1 + 2\sum_{k=1}^{\infty} \rho_k(\theta)}$$

from Brooks et al. (2011) where the infinite sum is truncated at lag k when $\rho_{k+1}(\theta) < 0$.

Value

A number between 0 and 1 indicating the esr value.

References

Brooks, S., Gelman, A., Jones, G.L., and Meng, X.-L. (Editors). 2011. Handbook for Markov Chain Monte Carlo. Taylor & Francis, Boca Raton.

```
Other convergence: converged_pars(), converged_terms(), converged(), esr_pars(), esr_terms(), rhat_pars(), rhat_terms(), rhat()
```

esr.mcmc.list 25

esr.mcmc.list

Effective Sampling Rate

Description

Calculates the effective sampling rate (esr).

Usage

```
## S3 method for class 'mcmc.list'
esr(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

X	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
	Other arguments passed to methods.

Details

By default

$$\frac{1}{1 + 2\sum_{k=1}^{\infty} \rho_k(\theta)}$$

from Brooks et al. (2011) where the infinite sum is truncated at lag k when $\rho_{k+1}(\theta) < 0$.

Value

A number between 0 and 1 indicating the esr value.

References

Brooks, S., Gelman, A., Jones, G.L., and Meng, X.-L. (Editors). 2011. Handbook for Markov Chain Monte Carlo. Taylor & Francis, Boca Raton.

26 esr.mcmcarray

esr.mcmcarray

Effective Sampling Rate

Description

Calculates the effective sampling rate (esr).

Usage

```
## S3 method for class 'mcmcarray'
esr(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

x An object.

by A string indicating whether to determine by "term", "parameter" or "all".

as_df A flag indicating whether to return the values as a data frame versus a named list.

na_rm A flag specifying whether to ignore missing values.

Other arguments passed to methods.

Details

By default

$$\frac{1}{1 + 2\sum_{k=1}^{\infty} \rho_k(\theta)}$$

from Brooks et al. (2011) where the infinite sum is truncated at lag k when $\rho_{k+1}(\theta) < 0$.

Value

A number between 0 and 1 indicating the esr value.

References

Brooks, S., Gelman, A., Jones, G.L., and Meng, X.-L. (Editors). 2011. Handbook for Markov Chain Monte Carlo. Taylor & Francis, Boca Raton.

ess 29

ess

P-Value Effective Sample Size

Description

Calculates the effective sample size based on esr().

Usage

```
ess(x, by = "all", as_df = FALSE)
```

Arguments

x An MCMC object.

by A string indicating whether to determine by "term", "parameter" or "all".

as_df A flag indicating whether to return the results as a data frame or list.

Examples

```
ess(mcmcr_example)
```

estimates.mcarray

Estimates

Description

Calculates the estimates for an MCMC object.

Usage

```
## S3 method for class 'mcarray'
estimates(x, fun = median, as_df = FALSE, ...)
```

Arguments

x An object.

fun A function that given a numeric vector returns a numeric scalar.

as_df A flag indicating whether to return the values as a data frame versus a named

list.

... Other arguments passed to methods.

Value

A named list or data frame.

See Also

Other MCMC manipulations: bind_chains(), bind_iterations(), collapse_chains(), split_chains()

30 estimates.mcmc.list

Description

Calculates the estimates for an MCMC object.

Usage

```
## S3 method for class 'mcmc'
estimates(x, fun = median, as_df = FALSE, ...)
```

Arguments

x An object.
 fun A function that given a numeric vector returns a numeric scalar.
 as_df A flag indicating whether to return the values as a data frame versus a named list.

Other arguments passed to methods.

Value

A named list or data frame.

See Also

Other MCMC manipulations: bind_chains(), bind_iterations(), collapse_chains(), split_chains()

```
estimates.mcmc.list Estimates
```

Description

Calculates the estimates for an MCMC object.

Usage

```
## S3 method for class 'mcmc.list'
estimates(x, fun = median, as_df = FALSE, ...)
```

Arguments

x	An object.
fun	A function that given a numeric vector returns a numeric scalar.
as_df	A flag indicating whether to return the values as a data frame versus a named list.
	Other arguments passed to methods.

estimates.mcmcarray 31

Value

A named list or data frame.

See Also

Other MCMC manipulations: bind_chains(), bind_iterations(), collapse_chains(), split_chains()

```
estimates.mcmcarray Estimates
```

Description

Calculates the estimates for an MCMC object.

Usage

```
## S3 method for class 'mcmcarray'
estimates(x, fun = median, as_df = FALSE, ...)
```

Arguments

x An object.

fun A function that given a numeric vector returns a numeric scalar.

as_df A flag indicating whether to return the values as a data frame versus a named

list.

... Unused.

Value

A named list or data frame.

See Also

Other MCMC manipulations: bind_chains(), bind_iterations(), collapse_chains(), split_chains()

```
estimates.mcmcr Estimates
```

Description

Calculates the estimates for an MCMC object.

Usage

```
## S3 method for class 'mcmcr'
estimates(x, fun = median, as_df = FALSE, ...)
```

32 fill_all.mcarray

Arguments

x An object.

fun A function that given a numeric vector returns a numeric scalar.

as_df A flag indicating whether to return the values as a data frame versus a named list.

Other arguments passed to methods.

Value

A named list or data frame.

See Also

```
Other MCMC manipulations: bind_chains(), bind_iterations(), collapse_chains(), split_chains()
```

Examples

```
estimates(mcmcr_example)
```

```
fill_all.mcarray Fill All Values
```

Description

Fills all of an object's (missing and non-missing) values while preserving the object's dimensionality and class.

Usage

```
## S3 method for class 'mcarray'
fill_all(x, value = 0, nas = TRUE, ...)
```

Arguments

x An object.
 value A scalar of the value to replace values with.
 nas A flag specifying whether to also fill missing values.
 ... Other arguments passed to methods.

Value

The modified object.

Methods (by class)

logical: Fill All for logical Objects
integer: Fill All for integer Objects
numeric: Fill All for numeric Objects
character: Fill All for character Objects

fill_all.mcmcarray 33

See Also

```
Other fill: fill_na()
```

Examples

```
# logical
fill_all(c(TRUE, NA, FALSE))
fill_all(c(TRUE, NA, FALSE, nas = FALSE))
fill_all(c(TRUE, NA, FALSE, value = NA))

# integer
fill_all(matrix(1:4, nrow = 2), value = -1)

# numeric
fill_all(c(1, 4, NA), value = TRUE)
fill_all(c(1, 4, NA), value = TRUE, nas = FALSE)

# character
fill_all(c("some", "words"), value = TRUE)
```

fill_all.mcmcarray

Fill All Values

Description

Fills all of an object's (missing and non-missing) values while preserving the object's dimensionality and class.

Usage

```
## S3 method for class 'mcmcarray'
fill_all(x, value = 0, nas = TRUE, ...)
```

Arguments

x An object.

value A scalar of the value to replace values with.

nas A flag specifying whether to also fill missing values.

... Other arguments passed to methods.

Value

The modified object.

Methods (by class)

- logical: Fill All for logical Objects
- integer: Fill All for integer Objects
- numeric: Fill All for numeric Objects
- character: Fill All for character Objects

fill_all.mcmcr

See Also

```
Other fill: fill_na()
```

Examples

```
# logical
fill_all(c(TRUE, NA, FALSE))
fill_all(c(TRUE, NA, FALSE, nas = FALSE))
fill_all(c(TRUE, NA, FALSE, value = NA))

# integer
fill_all(matrix(1:4, nrow = 2), value = -1)

# numeric
fill_all(c(1, 4, NA), value = TRUE)
fill_all(c(1, 4, NA), value = TRUE, nas = FALSE)

# character
fill_all(c("some", "words"), value = TRUE)
```

fill_all.mcmcr

Fill All Values

Description

Fills all of an object's (missing and non-missing) values while preserving the object's dimensionality and class.

Usage

```
## S3 method for class 'mcmcr'
fill_all(x, value = 0, nas = TRUE, ...)
```

Arguments

x An object.

value A scalar of the value to replace values with.

nas A flag specifying whether to also fill missing values.

... Other arguments passed to methods.

Value

The modified object.

Methods (by class)

- logical: Fill All for logical Objects
- integer: Fill All for integer Objects
- numeric: Fill All for numeric Objects
- character: Fill All for character Objects

is.mcarray 35

See Also

```

fill_all(c(TRUE, NA, FALSE))
fill_all(c(TRUE, NA, FALSE, nas = FALSE))
fill_all(c(TRUE, NA, FALSE, value = NA))

# integer
fill_all(matrix(1:4, nrow = 2), value = -1)

# numeric
fill_all(c(1, 4, NA), value = TRUE)
fill_all(c(1, 4, NA), value = TRUE, nas = FALSE)

# character
fill_all(c("some", "words"), value = TRUE)
```

is.mcarray

Is mcarray Object

Description

Tests whether an object is an mcarray.

Usage

```
is.mcarray(x)
```

Arguments

Х

The object to test.

Value

A flag indicating whether the test was positive.

```
is.mcarray(mcmcr_example)
```

is.mcmcr

is.mcmcarray

Is mcmcarray Object

Description

Tests whether an object is an mcmcarray-object().

Usage

```
is.mcmcarray(x)
```

Arguments

Х

The object to test.

Value

A flag indicating whether the test was positive.

Examples

```
is.mcmcarray(mcmcr_example$beta)
```

is.mcmcr

Is mcmcr Object

Description

Tests whether an object is an mcmcr-object().

Usage

```
is.mcmcr(x)
```

Arguments

Χ

The object to test.

Value

A flag indicating whether the test was positive.

```
is.mcmcr(mcmcr_example)
```

is.mcmcrs 37

is.mcmcrs

Is mcmcrs Object

Description

Tests whether an object is an mcmcrs-object().

Usage

```
is.mcmcrs(x)
```

Arguments

Х

The object to test.

Value

A flag indicating whether the test was positive.

Examples

```
is.mcmcrs(mcmcrs(mcmcr_example))
```

mcmcarray-object

mcmcarray

Description

An mcmcarray object is an an array where the first dimension is the chains, the second dimension is the iterations and the subsequent dimensions represent the dimensionality of the parameter. The name mcmcarray reflects the fact that the MCMC dimensions, ie the chains and iterations, precede the parameter dimensions.

Examples

mcmcr_example\$beta

38 mcmcrs

mcmcr-object

mcmcr

Description

An mcmcr object stores multiple uniquely named mcmcarray-object() objects with the same number of chains and iterations.

Details

mcmcr objects allow a set of dimensionality preserving parameters to be manipulated and queried as a whole.

Examples

mcmcr_example

 ${\tt mcmcrs}$

Create mcmcrs

Description

Creates an mcmcrs-object() from multiple link{mcmcr-object}s.

Usage

```
mcmcrs(...)
```

Arguments

... Objects of class mcmcr.

Value

An object of class mcmcrs

Examples

```
mcmcrs(mcmcr_example, mcmcr_example)
```

mcmcrs-object 39

mcmcrs-object

mcmcrs

Description

An mcmcrs object stores multiple mcmcr-object()s with the same parameters and the same number of chains and iterations.

Details

mcmcrs objects allow the results of multiple analyses using the same model to be manipulated and queried as a whole.

Examples

```
mcmcrs(mcmcr_example, mcmcr_example)
```

mcmcr_example

An Example mcmcr Object

Description

An example mcmcr-object() derived from coda::[line][coda::line].

Usage

mcmcr_example

Format

An object of class mcmcr of length 3.

Examples

mcmcr_example

40 mcmc_map

mcmc_aperm

MCMC Object Transposition

Description

Transpose an MCMC object by permuting its parameter dimensions.

Usage

```
mcmc_aperm(x, perm, ...)
```

Arguments

x The MCMC object to transpose.

perm A integer vector of the new order for the parameter dimensions. Missing pa-

rameter dimensions are added on the end. If perm = NULL (the default) the

parameter dimensions are reversed.

... Unused

Value

The modified MCMC object

mcmc_map

MCMC Map

Description

Adjust the sample values of an MCMC object using a function.

Usage

```
mcmc_map(.x, .f, .by = 1:npdims(.x), ...)
```

Arguments

.x An MCMC object.f The function to use

.by A positive integer vector of the dimensions to apply the function over.

... Additional arguments passed to .f.

Value

The updated MCMC object.

Examples

```
mcmc_map(mcmcr_example$beta, exp)
```

nchains.mcarray 41

nchains.mcarray

Number of Chains

Description

Gets the number of chains of an MCMC object.

Usage

```
## S3 method for class 'mcarray'
nchains(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

An integer scalar of the number of chains.

See Also

```
Other MCMC dimensions: niters(), npars(), nsams(), nsims(), nterms()
```

nchains.mcmcarray

Number of Chains

Description

Gets the number of chains of an MCMC object.

Usage

```
## S3 method for class 'mcmcarray' nchains(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

An integer scalar of the number of chains.

```
Other MCMC dimensions: niters(), npars(), nsams(), nsims(), nterms()
```

42 nchains.mcmcrs

nchains.mcmcr

Number of Chains

Description

Gets the number of chains of an MCMC object.

Usage

```
## S3 method for class 'mcmcr'
nchains(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

An integer scalar of the number of chains.

See Also

```
Other MCMC dimensions: niters(), npars(), nsams(), nsims(), nterms()
```

nchains.mcmcrs

Number of Chains

Description

Gets the number of chains of an MCMC object.

Usage

```
## S3 method for class 'mcmcrs' nchains(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

An integer scalar of the number of chains.

```
Other MCMC dimensions: niters(), npars(), nsams(), nsims(), nterms()
```

niters.mcarray 43

niters.mcarray

Number of Iterations

Description

Gets the number of iterations (in a chain) of an MCMC object.

Usage

```
## S3 method for class 'mcarray'
niters(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

An integer scalar of the number of iterations.

See Also

```
Other MCMC dimensions: nchains(), npars(), nsams(), nsims(), nterms()
```

niters.mcmcarray

Number of Iterations

Description

Gets the number of iterations (in a chain) of an MCMC object.

Usage

```
## S3 method for class 'mcmcarray'
niters(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

An integer scalar of the number of iterations.

```
Other MCMC dimensions: nchains(), npars(), nsams(), nsims(), nterms()
```

44 niters.mcmcrs

niters.mcmcr

Number of Iterations

Description

Gets the number of iterations (in a chain) of an MCMC object.

Usage

```
## S3 method for class 'mcmcr'
niters(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

An integer scalar of the number of iterations.

See Also

```
Other MCMC dimensions: nchains(), npars(), nsams(), nsims(), nterms()
```

niters.mcmcrs

Number of Iterations

Description

Gets the number of iterations (in a chain) of an MCMC object.

Usage

```
## S3 method for class 'mcmcrs' niters(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

An integer scalar of the number of iterations.

```
Other MCMC dimensions: nchains(), npars(), nsams(), nsims(), nterms()
```

npars.mcarray 45

npars.mcarray Number of Parameters

Description

Gets the number of parameters of an object.

The default methods returns the length of pars() if none are NA, otherwise it returns NA.

Usage

```
## S3 method for class 'mcarray'
npars(x, scalar = NULL, ...)
```

Arguments

x An object.

scalar A logical scalar specifying whether to include all parameters (NULL), only

scalars (TRUE) or all parameters except scalars (FALSE).

... Other arguments passed to methods.

Value

An integer scalar of the number of parameters.

See Also

```
pars()
Other MCMC dimensions: nchains(), niters(), nsams(), nsims(), nterms()
```

Other parameters: pars(), set_pars()

npars.mcmcarray

Number of Parameters

Description

Gets the number of parameters of an object.

The default methods returns the length of pars() if none are NA, otherwise it returns NA.

Usage

```
## S3 method for class 'mcmcarray'
npars(x, scalar = NULL, ...)
```

Arguments

x An object.

scalar A logical scalar specifying whether to include all parameters (NULL), only

scalars (TRUE) or all parameters except scalars (FALSE).

... Other arguments passed to methods.

46 npars.mcmcr

Value

An integer scalar of the number of parameters.

See Also

```
pars()
Other MCMC dimensions: nchains(), niters(), nsams(), nsims(), nterms()
Other parameters: pars(), set_pars()
```

npars.mcmcr

Number of Parameters

Description

Gets the number of parameters of an object.

The default methods returns the length of pars() if none are NA, otherwise it returns NA.

Usage

```
## S3 method for class 'mcmcr'
npars(x, scalar = NULL, ...)
```

Arguments

x An object.
 scalar A logical scalar specifying whether to include all parameters (NULL), only scalars (TRUE) or all parameters except scalars (FALSE).
 ... Other arguments passed to methods.

Value

An integer scalar of the number of parameters.

```
pars()
Other MCMC dimensions: nchains(), niters(), nsams(), nsims(), nterms()
Other parameters: pars(), set_pars()
```

npdims.mcmcarray 47

npdims.mcmcarray

Number of Parameter Dimensions

Description

Gets the number of the dimensions of each parameter of an object.

The default methods returns the length of each element of pdims() as an integer vector.

Usage

```
## S3 method for class 'mcmcarray' npdims(x, ...)
```

Arguments

x An object.

. . . Other arguments passed to methods.

Value

A named integer vector of the number of dimensions of each parameter.

See Also

```
Other dimensions: dims(), ndims(), pdims()
```

npdims.mcmcr

Number of Parameter Dimensions

Description

Gets the number of the dimensions of each parameter of an object.

The default methods returns the length of each element of pdims() as an integer vector.

Usage

```
## S3 method for class 'mcmcr' npdims(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

A named integer vector of the number of dimensions of each parameter.

```
Other dimensions: dims(), ndims(), pdims()
```

48 nterms.mcmcr

nterms.mcmcarray

Number of Terms

Description

Gets the number of terms of an MCMC object.

Usage

```
## S3 method for class 'mcmcarray' nterms(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

A integer scalar of the number of terms.

See Also

```
Other MCMC dimensions: nchains(), niters(), npars(), nsams(), nsims()
```

nterms.mcmcr

Number of Terms

Description

Gets the number of terms of an MCMC object.

Usage

```
## S3 method for class 'mcmcr' nterms(x, ...)
```

Arguments

x An object.

. . . Other arguments passed to methods.

Value

A integer scalar of the number of terms.

```
Other MCMC dimensions: nchains(), niters(), npars(), nsams(), nsims()
```

nterms.mcmcrs 49

Description

Gets the number of terms of an MCMC object.

Usage

```
## S3 method for class 'mcmcrs' nterms(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

A integer scalar of the number of terms.

See Also

Other MCMC dimensions: nchains(), niters(), npars(), nsams(), nsims()

params	Parameter Descriptions

Description

Parameter Descriptions

Arguments

X	An object.
scalar	A logical scalar specifying whether to include all parameters (NULL), only scalars (TRUE) or all parameters except scalars (FALSE).
terms	A logical scalar specifying whether to provide the parameters for each term.
nas	A flag specifying whether to also fill missing values.
nthin	A positive integer of the thinning rate.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
fun	A function that given a numeric vector returns a numeric scalar.
bound	flag specifying whether to bind mcmcrs objects by their chains before calculating rhat.
rhat	The maximum rhat value.

50 pars.mcmcrs

esr The minimum effective sampling rate.

na_rm A flag specifying whether to ignore missing values.

parameters A character vector (or NULL) of the parameters to subset by.

An integer vector (or NULL) of the iterations to subset by.

... Unused.

pars.mcmcr

Parameter Names

Description

Gets the parameter names.

Usage

```
## S3 method for class 'mcmcr'
pars(x, scalar = NULL, terms = FALSE, ...)
```

Arguments

x An object.

scalar A logical scalar specifying whether to include all parameters (NULL), only

scalars (TRUE) or all parameters except scalars (FALSE).

terms A logical scalar specifying whether to provide the parameters for each term.

... Other arguments passed to methods.

Value

A character vector of the names of the parameters.

See Also

```
Other parameters: npars(), set_pars()
```

pars.mcmcrs

Parameter Names

Description

Gets the parameter names.

Usage

```
## S3 method for class 'mcmcrs'
pars(x, scalar = NULL, terms = FALSE, ...)
```

pdims.mcarray 51

Arguments

X	An object.
scalar	A logical scalar specifying whether to include all parameters (NULL), only scalars (TRUE) or all parameters except scalars (FALSE).
terms	A logical scalar specifying whether to provide the parameters for each term.
	Other arguments passed to methods

... Other arguments passed to methods.

Value

A character vector of the names of the parameters.

See Also

```
Other parameters: npars(), set_pars()
```

|--|--|

Description

Gets the dimensions of each parameter of an object.

Usage

```
## S3 method for class 'mcarray' pdims(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

A named list of integer vectors of the dimensions of each parameter.

```
Other dimensions: dims(), ndims(), npdims()
```

52 pdims.mcmcr

pdims.mcmcarray

Parameter Dimensions

Description

Gets the dimensions of each parameter of an object.

Usage

```
## S3 method for class 'mcmcarray' pdims(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

A named list of integer vectors of the dimensions of each parameter.

See Also

```
Other dimensions: dims(), ndims(), npdims()
```

pdims.mcmcr

Parameter Dimensions

Description

Gets the dimensions of each parameter of an object.

Usage

```
## S3 method for class 'mcmcr'
pdims(x, ...)
```

Arguments

An object.

... Other arguments passed to methods.

Value

A named list of integer vectors of the dimensions of each parameter.

```
Other dimensions: dims(), ndims(), npdims()
```

rhat.mcarray 53

rhat.mcarray

Description

Calculates an R-hat (potential scale reduction factor) value.

Usage

```
## S3 method for class 'mcarray'
rhat(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

x	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
	Other arguments passed to methods.

Details

By default the uncorrected, unfolded, univariate, split R-hat value.

Value

A number >= 1 indicating the rhat value.

References

Gelman, A., and Rubin, D.B. 1992. Inference from Iterative Simulation Using Multiple Sequences. Statistical Science 7(4): 457–472.

```
Other convergence: converged_pars(), converged_terms(), converged(), esr_pars(), esr_terms(), esr(), rhat_pars(), rhat_terms()
```

rhat.mcmc

Description

Calculates an R-hat (potential scale reduction factor) value.

Usage

```
## S3 method for class 'mcmc'
rhat(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

х	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
	Other arguments passed to methods.

Details

By default the uncorrected, unfolded, univariate, split R-hat value.

Value

A number >= 1 indicating the rhat value.

References

Gelman, A., and Rubin, D.B. 1992. Inference from Iterative Simulation Using Multiple Sequences. Statistical Science 7(4): 457–472.

```
Other convergence: converged_pars(), converged_terms(), converged(), esr_pars(), esr_terms(), esr(), rhat_pars(), rhat_terms()
```

rhat.mcmc.list 55

Description

Calculates an R-hat (potential scale reduction factor) value.

Usage

```
## S3 method for class 'mcmc.list'
rhat(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

X	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
	Other arguments passed to methods.

Details

By default the uncorrected, unfolded, univariate, split R-hat value.

Value

A number >= 1 indicating the rhat value.

References

Gelman, A., and Rubin, D.B. 1992. Inference from Iterative Simulation Using Multiple Sequences. Statistical Science 7(4): 457–472.

```
Other convergence: converged_pars(), converged_terms(), converged(), esr_pars(), esr_terms(), esr(), rhat_pars(), rhat_terms()
```

56 rhat.mcmcarray

rhat.mcmcarray

Description

Calculates an R-hat (potential scale reduction factor) value.

Usage

```
## S3 method for class 'mcmcarray'
rhat(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

X	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
• • •	Other arguments passed to methods.

Details

By default the uncorrected, unfolded, univariate, split R-hat value.

Value

A number >= 1 indicating the rhat value.

References

Gelman, A., and Rubin, D.B. 1992. Inference from Iterative Simulation Using Multiple Sequences. Statistical Science 7(4): 457–472.

```
Other convergence: converged_pars(), converged_terms(), converged(), esr_pars(), esr_terms(), esr(), rhat_pars(), rhat_terms()
```

rhat.memer 57

Description

Calculates an R-hat (potential scale reduction factor) value.

Usage

```
## S3 method for class 'mcmcr'
rhat(x, by = "all", as_df = FALSE, na_rm = FALSE, ...)
```

Arguments

X	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
• • •	Other arguments passed to methods.

Details

By default the uncorrected, unfolded, univariate, split R-hat value.

Value

A number ≥ 1 indicating the rhat value.

References

Gelman, A., and Rubin, D.B. 1992. Inference from Iterative Simulation Using Multiple Sequences. Statistical Science 7(4): 457–472.

See Also

```
Other convergence: converged_pars(), converged_terms(), converged(), esr_pars(), esr_terms(), esr(), rhat_pars(), rhat_terms()
```

Examples

```
rhat(mcmcr_example)
rhat(mcmcr_example, by = "parameter")
rhat(mcmcr_example, by = "term")
rhat(mcmcr_example, by = "term", as_df = TRUE)
```

rhat.memers

Description

Calculates an R-hat (potential scale reduction factor) value.

Usage

```
## S3 method for class 'mcmcrs'
rhat(x, by = "all", as_df = FALSE, na_rm = FALSE, bound = FALSE, ...)
```

Arguments

X	An object.
by	A string indicating whether to determine by "term", "parameter" or "all".
as_df	A flag indicating whether to return the values as a data frame versus a named list.
na_rm	A flag specifying whether to ignore missing values.
bound	flag specifying whether to bind mcmcrs objects by their chains before calculating rhat.
• • •	Other arguments passed to methods.

Details

By default the uncorrected, unfolded, univariate, split R-hat value.

Value

A number >= 1 indicating the rhat value.

References

Gelman, A., and Rubin, D.B. 1992. Inference from Iterative Simulation Using Multiple Sequences. Statistical Science 7(4): 457–472.

See Also

```
Other convergence: converged_pars(), converged_terms(), converged(), esr_pars(), esr_terms(), esr(), rhat_pars(), rhat_terms()
```

Examples

```
rhat(mcmcrs(mcmcr_example, mcmcr_example))
rhat(mcmcrs(mcmcr_example, mcmcr_example), bound = TRUE)
```

set_pars.mcmcr 59

set_pars.mcmcr

Set Parameters

Description

Sets an object's parameter names.

The assignment version pars<-() forwards to set_pars().

Usage

```
## S3 method for class 'mcmcr'
set_pars(x, value, ...)
```

Arguments

x An object.

value A character vector of the new parameter names.

... Other arguments passed to methods.

Details

value must be a unique character vector of the same length as the object's parameters.

Value

The modified object.

See Also

Other parameters: npars(), pars()

set_pars.mcmcrs

Set Parameters

Description

Sets an object's parameter names.

The assignment version pars<-() forwards to set_pars().

Usage

```
## S3 method for class 'mcmcrs'
set_pars(x, value, ...)
```

Arguments

x An object.

value A character vector of the new parameter names.

... Other arguments passed to methods.

Details

value must be a unique character vector of the same length as the object's parameters.

Value

The modified object.

See Also

```
Other parameters: npars(), pars()
```

Description

Splits each of an MCMC object's chains in half to double the number of chains and halve the number of iterations.

Usage

```
## S3 method for class 'mcmcarray'
split_chains(x, ...)
```

Arguments

x An object.

... Other arguments passed to methods.

Value

The modified object.

See Also

Other MCMC manipulations: bind_chains(), bind_iterations(), collapse_chains(), estimates()

split_chains.mcmcr 61

```
split_chains.mcmcr
```

Split Chains

Description

Splits each of an MCMC object's chains in half to double the number of chains and halve the number of iterations.

Usage

```
## S3 method for class 'mcmcr'
split_chains(x, ...)
```

Arguments

x An object.

.. Other arguments passed to methods.

Value

The modified object.

See Also

Other MCMC manipulations: bind_chains(), bind_iterations(), collapse_chains(), estimates()

subset

Subset an MCMC Object

Description

Subsets an MCMC object by its chains, iterations and/or parameters.

Usage

```
## S3 method for class 'mcmcarray'
subset(x, chains = NULL, iters = NULL, iterations = NULL, ...)
## S3 method for class 'mcmcr'
subset(
    x,
    chains = NULL,
    iters = NULL,
    iters = NULL,
    iterations = NULL,
    parameters = NULL,
    ...
)
```

62 tidy.memc.memer

```
## S3 method for class 'mcmcrs'
subset(
    x,
    chains = NULL,
    iters = NULL,
    pars = NULL,
    iterations = NULL,
    parameters = NULL,
    ...
)
```

Arguments

x The MCMC object to subsetchains An integer vector of chains.iters An integer vector of iterations.

iterations An integer vector (or NULL) of the iterations to subset by.

... Unused.

pars A character vector of parameter names.

parameters A character vector (or NULL) of the parameters to subset by.

Methods (by class)

• mcmcarray: Subset an mcmcarray object

• mcmcr: Subset an mcmcr object

• mcmcrs: Subset an mcmcrs object

Examples

```
subset(mcmcr_example,
  chains = 2L, iters = 1:100,
  pars = c("beta", "alpha")
)
```

tidy.mcmc.mcmcr

Turn an object into a tidy tibble

Description

Turn an object into a tidy tibble

Usage

```
## S3 method for class 'mcmc.mcmcr' tidy(x, ...)
```

Arguments

x An object to be converted into a tidy tibble::tibble().

... Additional arguments to tidying method.

vld_mcmcr 63

Value

```
A tibble::tibble() with information about model components.
```

Methods

No methods found in currently loaded packages.

vld_mcmcr

Validate MCMC Objects

Description

Validates class and structure of MCMC objects.

Usage

```
vld_mcmcarray(x)
vld_mcmcr(x)
vld_mcmcrs(x)
```

Arguments

Х

The object to check.

Details

```
To just validate class use chk::vld_s3_class().
```

Value

A flag indicating whether the object was validated.

Functions

```
    vld_mcmcarray: Validate mcmcarray-object()
    vld_mcmcr: Validate mcmcr-object()
    vld_mcmcrs: Validate mcmcrs-object()
```

```
chk_mcmcr()
```

64 zero

Examples

```
#' vld_mcmcarray
vld_mcmcarray(1)

# vld_mcmcr
vld_mcmcr(1)
vld_mcmcr(mcmcr::mcmcr_example)

# vld_mcmcrs
vld_mcmcrs(1)
```

zero

Zero MCMC Sample Values

Description

Zeros an MCMC object's sample values.

Usage

```
zero(x, ...)
## S3 method for class 'mcarray'
zero(x, ...)
## S3 method for class 'mcmcarray'
zero(x, ...)
## S3 method for class 'mcmcr'
zero(x, pars = NULL, ...)
```

Arguments

```
x The MCMC object.
... Unused
```

pars A character vector (or NULL) of the pars to zero.

Details

It is used for removing the effect of a random effect where the expected value is 0.

Value

The MCMC

Methods (by class)

• mcarray: Zero an mcarray object

• mcmcarray: Zero an mcmcarray object

• mcmcr: Zero an mcmcr object

zero 65

Examples

zero(mcmcr_example, pars = "beta")
